## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on May 21, 2010 has been entered.
2. Claims 1-23 are currently pending and have been considered below.

### ***Allowable Subject Matter***

3. Claims 1-23 are allowed.

### ***Examiner's Statement of Reasons for Allowance***

4. The following is an examiner's statement of reasons for allowance:

The invention pertains to methods and apparatuses for targeting the delivery of advertisements over a network such as the Internet. Statistics are compiled on individual users and networks and the use of the advertisements is tracked to permit targeting of the advertisements of individual users. In response to requests from affiliated (content) sites, an advertising server transmits to people accessing the page of

a site an appropriate one of the advertisement based upon profiling of users and networks.

The independent claims (Claims 1 and 7) each include the limitation wherein said advertisement request is generated by the user node in response to processing a link received from a first affiliate node in response to a prior content request sent from said user node to said first affiliate node and wherein said advertisement is associated with a second affiliate node.

As per discussion between the Examiner and Applicant during prosecution on 2/2/2010 the prior art does not address forwarding a request to an affiliate node from user requested and received content which has an embedded link to the affiliate (advertising server) node.

Prior art was found which provides updating the available advertisements and sending the selected advertisement to the user node for display based upon electronic user profiles and whereby the advertisement is activated by the user (Goldhaber et al. US 5,794,210 Figure 11A, column 5, lines 17-24; column 6, lines 24-27 and column 16, lines 6-10). Upon further search the Examiner also found prior art (Dedrick US 5,752,238 column 2, line 49 continued to column 4, line 39 whereby the use of consumer/user profiles are used to generate advertisements which have software tools with embedded variables within electronic information for monitoring consumer interactions).

However, no additional prior art has been found which discloses an embedded link in the content provided to the end user wherein the embedded link received from the first affiliated node in response to the content request sent from said user node to said first affiliate node and wherein said advertisement associated with a second affiliate node is transmitted automatically in response to the link activated upon the content received by the user. (The instant application performs one additional step in the process of matching advertisements to users-consumers which is that after the user request is processed, content is forwarded to the user with a link embedded in the content, this link in turn forwards the request to the ad server. This step overcomes Goldhaber).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Goldhaber (5,794,210) discloses an advertising method and system wherein users interest are derived from access to the users electronic profiles detailing preferences and past consuming behavior and after a user request for content is processed, content is forwarded to the user with an advertisement.

Dedrick (5,752,238) discloses a user driven (request) for content coupled with a network wherein the client (advertiser/publisher) maintains a database of end users for profiling and for providing advertisements associated with the content delivered.
